Founders Message #9

To All the Friends and Shareholders of Laser Energetics:

The Dazer Laser™ Team at Laser Energetics did very well at the New Jersey State League of Municipalities Trade Show in Atlantic City. Our team engaged the second largest number of visits of any booth at the show. Our team met with all kinds of interested prospects from Mayors, Senators and Chiefs of Police to S.W.A.T members, police, security personnel, and legislators.

The luncheon at the show was attended by most of the mayors in the state and Laser Energetics had a full, four color, back page advertisement for the Dazer Laser in the luncheon program. The ad accomplished its intended result. The follow-up has been exceptional.

Since the last Founders Message, we have signed up a very important manufacturer's representative group for Brazil, and now India is signing. We are getting into to the sales process with many large nations with RFI/RFP's being requested. We continue to respond to calls from within the USA and around the world, with great interest and demand for the product.

Status of Projects:

- **Dazer Laser™** - The sales pipeline continues to fill and our hard working Dazer Laser™ Team expects orders soon. The successful demonstration to one of the largest privately operated prison systems in the US has panned out. We expect and have been told that we'll be getting an order soon. We are on track to getting sales in before the end of the year. One of the reasons the demonstration was so successful was that it was accompanied by very detailed eye examinations of the dazed subjects, with eye tests taken both prior to the Dazing and after the Dazing. The tests proved that our products can truly be operated "eye-safe" at all ranges and that we have very effective method of helping to control problems with a less violent outcome.

As I write this letter, our Dazer Laser™ Team is headed to Canada to meet the highest levels of the Military and Law Enforcement. The Canadian officials will be receiving demonstrations of the Dazer Laser after a very successful meeting at a previous Canadian event (www.truepatriotlove.org), in which our team met the Canadian Minister of Defense, Generals and Prison Wardens. Canada is embracing the Dazer Laser as a high tech "Non-Lethal – Less Violent™" solution.

- **TRT Technology** - We have made an offer to a business development VP who has great experience in consumer electronics. He previously founded a very successful video conferencing company. While the offer has not been accepted as yet, we are hopeful we can come to terms. This executive will be in charge of the TRT Technology business. The team that will support him include Dr. John Magno – our VP of R&D, Dr. Charles Rohn – Technical Advisor on materials and polymer processing, Wayne Armstrong – Senior VP of Operations, and myself. There will be two focuses for TRT. First – implementation of the material into

other peoples products such as PDA's and Mobile Phones. Second, implementation into products that we have identified that would be unique as consumer products and for business, such as signage and special lighting. We are creating a branding name for the technology and are working with several companies to form a relationship for collaboration to integrate the TRT into their products.

- **Remote Sensing** – We will be receiving several patents on the new DP Green Pumped Alexandrite Laser for Remote Sensing of Chemical and Biological Warfare Agents. The laser can also be used for other applications. Recently, the U.S. Army has gone out for solicitations for the JCSD remote sensing program. Laser Energetics has discussed further development of the Laser for this application with a New Fortune 100 company. We have been discussing possibilities with this company, and will be meeting again in the next few weeks to specifically discuss areas of potential collaboration. We are seeking the path of greatest potential to bring the product to market as soon as possible. By working with both ITT and the new company, we will see who will become the best partner for this technology for LEI. We have the best technology in the world for this application, and we will be engaged with a big partner to help save the lives of our troops.
- **Photo Acoustic Imaging** using our BrightStar FLP Alexandrite Laser is a project we have been involved with for nine years. Our laser technology would be embedded into a medical imaging system that has much greater resolution than current technologies for breast and prostate cancer detection. A famous doctor has published many papers on this subject, who used LEI's Alexandrite laser to conduct key experiments. We are getting inquiries from around the world from people interested in buying our laser for development purposes, which would lead to a true clinical laser based system. We anticipate great business in this area in the future. More information will be forthcoming on this in the first Quarter 2010.

The Laser Energetics world class team is working hard to achieve World Class success! Laser Energetics – A place where “Good Guys & Girls Stick Together™ – Win Together” and why “Winners Never Quit and Quitters Never Win™”. Two sayings I live by and the reason why the future is ours. Laser Energetics, Inc and I want to wish all of our Great Shareholders a **Happy Thanksgiving and All the Best!**

Sincerely,

Robert D. Battis
Founder, President & CEO
Laser Energetics, Inc.
