

Laser Energetics Files Patent Applications for Dazer Laser™

Company Continues to Expand Intellectual Property Portfolio

Mercerville, N.J., October 22, 2009 – Laser Energetics, Inc. (Pink Sheets: LNGT) announced today that the Company has filed a total of five (5) patents covering its Dazer Laser Light Fighting Technology product line. After a very important discovery period, the patents will provide LEI with a sustainable competitive advantage in the market place.

Three (3) patents have been applied for on the Dazer Laser's Variable Range and Focus capabilities which have, for the first time, created the ability to operate a Non-Lethal Laser Weapon safely at all ranges from 1meter to 2400meters (model dependent), at full power. This allows a Dazer Laser to target the threat at Any Distance – Any Time – Any Where!

The second set of two (2) patents incorporate LEI's MEAN Beam™ laser technology. These patents cover the operation of LEI's Dazer Laser™ projecting laser light in both a continuous wave (CW) mode and a modulated (pulsed) mode-simultaneously, which provides the most devastating effects to the threat. Review LEI's website at www.laserenergetics.com for further details on these breakthrough technological advances.

Robert D. Batts, CEO of Laser Energetics, stated, "These patents, together with the underlying engineering design of the Dazer Laser™ - Light Fighting Technology products ensures that these devices will be the most effective "Non-Lethal – Less Violent"™ weapons available in the world today. For the first time this type of technology can be operated eye safe at all ranges because of the Dazer Lasers™ technological advancements. This will allow governments to embrace the technology without the legal consequences found with other so called Non-Lethal – More Violent weapons. The Dazer Laser has an important mission: The "Goal is Control" without Lawsuits, Death, Blindness, and unnecessary risk of danger to both the Enforcer and the Threat." This product accomplishes the goal – more efficiently, effectively at a lower cost to society.

About Laser Energetics, Inc.: LEI has and continues to develop a comprehensive and strategic laser product line that addresses applications in Industry, Science, Medicine and the Military. The Company has had a primary focus on its Alexandrite laser technology. These tunable solid state lasers are unique in that they can be conductively air cooled to compete favorably against water cooled lasers in many applications. In addition, these lasers have one of the greatest wavelength tuning ranges with a bandwidth of over 250nm. The company is pursuing markets that are diverse yet can use the same laser with their compact user friendly design. This laser technology provides a sustainable advantage over many other lasers because of their tune-ability, conductively air cooled operation, and their efficiency allowing these lasers to operate at preferred lower voltages such as 110 Volts as well as the military standard 28 VDC, as compared to other less efficient competitive lasers that are large and need 220 Volts to operate.

Safe Harbor: Statements regarding financial matters in this press release other than historical facts are "forward-looking statements" within the meaning of section 27A of the Securities Act of 1933, Section 21E of the Securities Exchange Act of 1934, and as that term is defined in the Private Securities Litigation Reform Act of 1995. The company intends that such statements about the Company's future expectations, including future revenues and earnings, technology efficacy and all other forward-looking statements be subject to the safe harbors created thereby. The Company is a development stage company who continues to be dependent upon outside capital to sustain its existence. Since these statements (future operational results and sales) involve risks and uncertainties and are subject to change at any time, the Company's actual results may differ materially from expected results.
