

Laser Energetics Files New Patent for its New GreenStar™ Laser *High Power DPSS Laser Technology Enables Dazer Laser to Pump Out 250 & 500mWatts of Power with Industry Leading Efficiency*

PRINCETON, N.J., June 21, 2010 /PRNewswire-FirstCall/ -- Laser Energetics, Inc. (OTCPK: [LNGT](#)) is pleased to announce that the Company has completed the patent application for its new GreenStar™ Diode Pumped Green Laser technology, which will be incorporated into its Dazer Laser™ - Light Fighting Technologies product line.

Mr. Robert Battis, Founder and CEO of Laser Energetics, describes the Company's newest laser technology, "LEI has filed Provisional Patent Application No. 61/348,312 with the US Patent and Trademark office, encompassing a new type of DPSS Green Laser that produces **Smarter • Smaller • Brighter • Cooler – Power.** This new laser, designed for "High Performance," achieved a 24% conversion efficiency along with powers of over 500mWatts. This was accomplished in a package designed to fit in the Dazer Laser™.

"This incredible performance" says Battis, "will allow our Dazer Laser to run with an optimal mix of Pulse Width Modulation and Continuous Wave operation both day and night without overheating, unlike other technologies that need to be operated pulsed to conserve power for cooling reasons. The Dazer Laser™ will outperform any other device available in the world today, during day or night operation."

Battis continued, "This GreenStar™ Diode pumped Green laser offers a more cost-effective solution than any other laser technology on the market. In fact, it will save Laser Energetics over \$600 on every Guardian and \$1,100 on every Defender it produces, while at the same time bypassing the need to pay royalties associated with patents covering use of multiple lasers optical distracters. Our one laser outperforms the combination of several other so-called high performance commercial lasers products", with better efficiency, power, cooler operation, and longer operation in CW mode for improved daytime operation. The company is hard at work incorporating its new product line of GreenStar™ lasers into its Dazer Laser™ - Light Fighting Technologies products. Check out the new Founders message on June 23, 2010.

About Laser Energetics, Inc.:

The Company has had a primary focus on its Alexandrite laser technology, its Dazer Laser – Light Fighting Technologies and its Total Reflectance Transmitter (TRT) technology. Laser Energetics has and continues to develop a comprehensive and strategic laser product line that addresses laser applications in Industry, Science, Medicine, Homeland Security and the Military.
