

## Dazer Laser® Communicator™

This would be the view from the person being engaged.

The Dazer Laser® Communicator™ accessory allows for a “non-lethal” means of communication between the operator and person being targeted. In addition to engaging an oncoming car with a Dazer Laser® Dazer Beam, the operator can project an image reading “STOP” (or word of your choosing) sending a clear message of intent.

# Dazer Laser® GUARDIAN

Light Fighting Technologies™

## The Ultimate Optical Distractors™ Bringing **LIGHT** to the Fight.™

The Dazer Laser® GUARDIAN will benefit many organizations & tactical applications such as:

- Army
- Navy
- Marines
- Air Force
- Coast Guard
- Special Operation Forces
- Law Enforcement & S.W.A.T.
- Correctional Officers
- Department of Homeland Security
- Convoy Security
- Air Combat Mission Support
- Customs & Border Patrol
- US Marshal Services
- Military Bases
- Embassies
- Maritime Security (Anti-piracy)
- TSA/Airport Security
- Juvenile Detention Centers
- Psychiatric & Mental Health Facilities
- Private Security Groups
- Armored Vehicles
- Park Services
- Cruise Ship Security
- Riot & Crowd Control
- Intelligence Investigations
- High Value Asset Protection

*Effective, Ingenious, Robust, Versatile, Compact, Lightweight, and Affordable  
best describes the all new Dazer Laser® - Light Fighting Technologies.*

Laser Energetics, Inc (“LEI”) is a dynamic, innovative, cutting edge laser technology company located in Mercerville, NJ just outside of Princeton. Laser Energetics is a publicly traded corporation (OTC: LNGT) that was founded in 1991 by Robert D. Battis, LEI’s President & CEO. Laser Energetics prime focus is on the Dazer Laser® - Light Fighting Technologies and it’s enabling GreenStar™ Diode Pumped Solid State (DPSS) Laser Technology as well as on its BrightStar™ Alexandrite Laser Technology.

Laser Energetics, Inc invented, designed, engineered and manufactures the new state-of-the-art Dazer Laser® GUARDIAN. All Dazer Laser® products are proudly made in the United States of America.

# IT IS EASIER TO DEFEAT THE THREAT WHEN THEY CANNOT SEE YOU!™

# The ULTIMATE Non-Lethal Weapons For Optical Distraction & Visual Impairment™

## Dazer Laser® GUARDIAN Light Fighting Technologies™

For the last ten years, laser "dazzling" devices, more commonly known as *Optical Distraction Devices*, have served an important role in Military Operations. They have been used in situations such as vehicle checkpoints, convoy security, and suppression of enemy fire at long ranges. This first level of escalation in the use of force continuum has only had capabilities at long ranges due to engineering limitations of current laser dazzlers because they operate using a Fixed Range & Focus beam. Fixed Range & Focus beams mean the operator fires a laser and the beam gets larger in diameter (diverges) as the range increases. A Fixed Range & Focus device can't be used in short range tactical scenarios, while at long ranges the device can't be used effectively due to too large a beam diameter. Simply "painting" or "targeting" the threat is not the same as visually impairing the threat.

The revolutionary Dazer Laser® GUARDIAN changes everything! The GUARDIAN is a handheld Optical Distraction & Visual Impairment Weapon which utilizes its patent pending Variable Range & Variable Focus™ Optics technology to allow for SAFE and EFFECTIVE visual impairment from 1 - 1000 meters (model dependent) and long range hailing & warning up to 4000 meters (model dependent). Having a Nominal Ocular Hazard Distance (NOHD) of one (1) meter makes this the only Optical Distraction device in the world that can be operated eye safe from one (1) meter and beyond.

### What will the Dazer Laser® GUARDIAN do for you?

- You control the fight while the threat fights the light™
- You limit the threat's maneuverability because their vision is being impaired, forcing the threat to comply buying you critical time to approach and apprehend them.
- You reduce the necessity to escalate to the use of more lethal force.
- As a result of using the Dazer Laser® GUARDIAN, you will save lives, money and time as well as reduce collateral damage & litigation expenses. Hence, the Dazer Laser® GUARDIAN pays for itself.

### Additional Features:

- Instant "ON" operation - no warm up necessary
- Can be operated eye-safe from 1 meter and beyond
- Effective visual impairment from 1 - 1000 meters (model dependent)
- Hailing & Warning to 4000 meters (4 km)
- Fully waterproof to 20 meters (66 feet)
- Vibration warning indicates 10 minutes of battery life remains and/or high temperature condition Built-in auto shut-off prevents overheating
- Optional quick mount/release MIL STD 1913 Picatinny Rail adapter

### Dazer Laser® GUARDIAN - Model: LFF-MB3HPL-MR (Range: 1-300 Meters) Dazer Laser® GUARDIAN - Model: LFF-MB3HPL-LR (Range: 1-1000 Meters)

#### REAR TRIGGER & BATTERY CAP:

A dual mode rear trigger operates in dazing or searchlight mode. Battery cap has a knurl grip for easy open and tight close to keep batteries secure and GUARDIAN water tight. Battery compartment allows for (2) CR123 lithium batteries which provide enough energy to fire 600 (10 second) Dazings at full power.

#### ERGONOMICALLY RUGGED HOUSING:

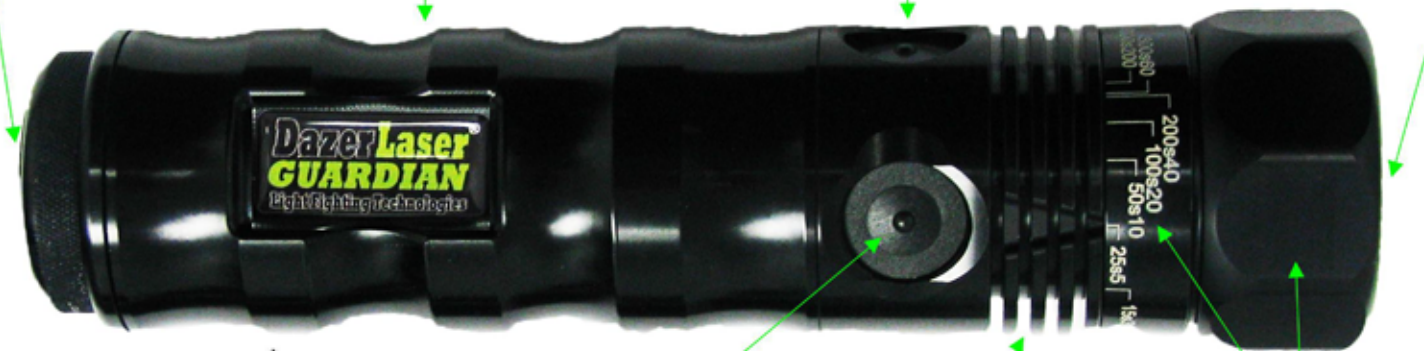

Housing is made of anodized aerospace aluminum, engineering thermo plastics/composites/elastomeric materials. The GUARDIAN is sealed at all entry points for superior protection in the harshest environments such as hot/cold temperatures, high humidity, and full waterproof submersion to 20 meters. Ruggedized for shock & vibration, transport & gunfire.

#### DAY/NIGHT MODE & INSTANT POWER-DOWN BUTTONS:

The two side buttons function as two of the four security code input buttons. Once activated, they function as the Day/Night mode buttons. Day and Night modes operate as a unique combination of continuous (CW) and modulated laser light due to our patent pending MEAN™ Beam technology.

#### FRONT APERTURE & LASER:

A combination of CW & modulated green laser light exits the aperture. This laser light is effective because of our patent pending Variable Range & Focus Optics. The front aperture mount is threaded to allow for the attachment of optional accessories. The Dazer Laser's patent pending diode pumped solid state (DPSS) GreenStar™ Laser is a Class IIIb, 532 nm laser that operates at 250 mW (CW-nominal).

\*GUARDIAN shown is actual size

### Physical Characteristics:

Length: 18.3 cm (7.2")  
Diameter: 4.3 cm (1.7")  
Weight: 16 ounces  
Colors: Black (Optional Green and Camouflage)

#### DUAL MODE FRONT TRIGGER:

Front trigger operates in either a low-powered searchlight mode or high-powered Dazing mode. The searchlight operates when the two stage trigger is slightly depressed. High-powered Dazing mode is activated when the two stage trigger is fully depressed and held. The front trigger is accessible when GUARDIAN is mounted via a Picatinny Rail adapter.

#### LASER HEAT SINK:

The heat sink draws heat away from the laser and disperses the heat over the fins, increasing the cooling of the laser for nominal operation from 0-50°C. Additionally, a vibration warning precedes a built-in auto shut-off designed to prevent the laser or electronics from overheating. Under normal operating conditions auto shut-off will not occur.

#### RANGE SELECTION:

The arrow on the left indicates the range the operator selects. The arrow on the right indicates the range selector which rotates through the predetermined ranges of: 5, 10, 15, 25, 50, 100, 200, 300 and 1000 meters. In addition to the noted ranges, a second number which is preceded by an "s" clearly indicates the minimum eye-safe range (NOHD) at each of the range settings.

### The Dazer Laser® GUARDIAN Pistol Grip Accessory

#### Pistol Grip

- Easy Connection
- Made of Engineering Thermo Plastic
- Ergonomic Grip
- Waterproof
- Battery Storage in Handle for (2) CR123-3V Batteries

The Pistol Grip easily attaches and detaches to the GUARDIAN allowing for operation with or without the Pistol Grip.
